Making AI work: practical adoption for your businesses

AI training, advisory and enablement for organisations in the MEA region

Daniel Khayat | Founder, Spectravia | Dubai, UAE

WHO WE ARE

The founder: 20+ years of frontier tech adoption in MEA

Daniel Khayat Founder, Spectravia dkhayat@spectravia.net

PAST

General Manager, Enterprise Sales and Product Management

Across the MEA region

Product leadership

IoT, XR hardware, smartphones, enterprise software. Magic Leap MEA, HTC MEA. Regional roles taking new technology to market.

TODAY

Corporate AI training

Prompt engineering, AI literacy and leadership programmes

AI advisory and consultation

Strategy, governance and adoption for organisations in KSA and UAE

20+
years in technology

20
countries and regions trained in

3
languages: Arabic, English, French

MBA
Hult International Business School

Vendor-side experience shows how technology platforms think about partners. Years in scouting and corporate life shaped how I build efficient teams.

01

The market need

The region is building for AI at scale

$320B

potential AI contribution to Middle East GDP by 2030 [1]

12.4% · 14%

share of 2030 GDP from AI in Saudi Arabia and the UAE (~14%) [1]

$10B+

committed by Microsoft to Middle East cloud and AI through 2030; Saudi skilling target of 3M people [2][3]

AED 13B

Abu Dhabi's plan to become the first fully AI-native government by 2027, with 200+ AI solutions [4]

So what: the infrastructure and the vendor commitment are in place. Adoption, not access, is the bottleneck.

[1] PwC Middle East, "The potential impact of AI in the Middle East" (2018 projection). [2] Microsoft, "Microsoft strengthens its commitment to the Middle East", Sept 2026. [3] Microsoft Source EMEA, "AI skilling in Saudi Arabia", Feb 2026. [4] Abu Dhabi Government Digital Strategy 2025–2027, via Analytics Insight, Sept 2026.

The gap: access to AI is not the same as value from AI

61%

of SMEs use at least one AI tool, yet 76% of those users are "novices". Only 6% report transformational impact. [1]

38%

of SMEs lack time for training, and 23% cite training costs as a barrier. [1]

0.4%

of surveyed firms in MENAAP qualify as frontier AI adopters. Saudi Arabia lags its income peers. [2]

65%*

of MENA enterprises reportedly lack a formal AI governance framework, while UAE and Saudi rules tighten. [3]

93%*

of firms exceeded AI token budgets as enterprise LLM spend tripled. Gartner expects 40% of agentic projects cancelled by 2027. [4][5]

[1] OECD, "Empowering SMEs in the age of AI: 2026 D4SME Survey" (2,018 SMEs, 12 countries). [2] World Bank, "AI Adoption in MENAAP: Evidence from Enterprise Surveys" (Udomsaph). [3] Kudo Advisory, "AI Governance in the Middle East". [4] McKinsey State of AI 2026, as reported by Fortune, 23 Sept 2026. [5] Gartner agentic AI forecast, via secondary summary. * Secondary source, indicative.

Five problems on the SME AI journey

01 · KNOWLEDGE
Basic AI literacy gap

SYMPTOM
Staff use AI tools ad hoc, with no shared standard

OUR ANSWER
AI fundamentals and prompt engineering training

02 · DIRECTION
No strategy or use-case priority

SYMPTOM
Scattered pilots with no business case

OUR ANSWER
Maturity assessment, roadmap, use-case prioritisation

03 · COST
Token and cost blindness

SYMPTOM
Bills exceed budget, no forecasting

OUR ANSWER
AI token economics: modelling and monthly monitoring

04 · TRANSFORMATION
Resistance and change fatigue

SYMPTOM
Pilots stall and adoption drops

OUR ANSWER
Change management, adoption programmes, agents and workflows

05 · TRUST
Governance and compliance gaps

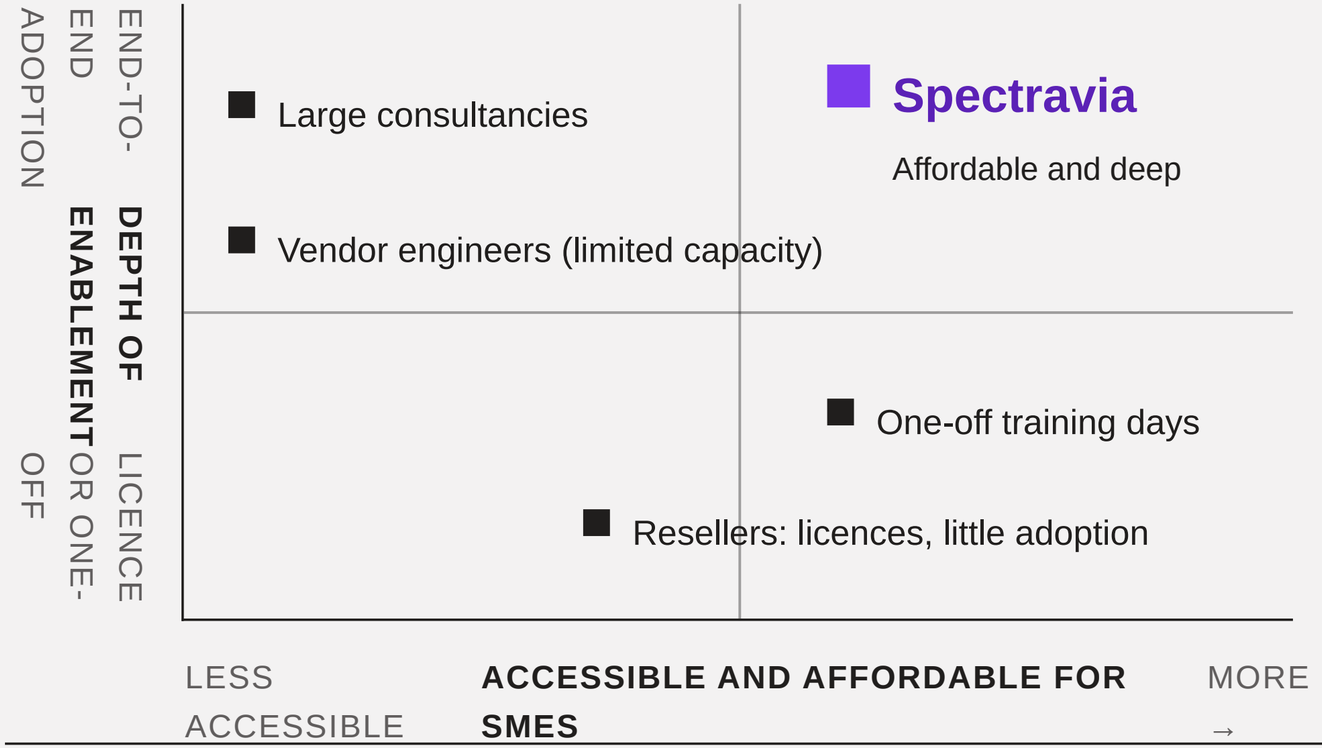

SYMPTOM
No AI inventory, unclear accountability

OUR ANSWER
Governance framework aligned to UAE and KSA rules

INCREASING MATURITY

Most SMEs skip steps 1 and 2 and jump straight to tools. That is why pilots stall.

Why SMEs are underserved

Vendor teams cannot cover the long tail

Solution engineers focus on the largest accounts, leaving mid-market customers without hands-on support.

Enterprise-grade pricing

Big consultancies are built for government and large enterprises, out of reach for most SMEs.

Licences without adoption

Resellers sell seats, but nobody owns training, governance and change.

The gap: affordable, deep, bilingual enablement that goes beyond one training day.

02

Our answer

Our approach: Train, Advise, Deploy, Sustain

01

Train

AI literacy, prompt engineering, leadership certification

SOLVES 1

02

Advise

Strategy and roadmap, governance, AI token economics

SOLVES 2, 3, 5

03

Deploy

Architecture, integration, agents and workflows, change management

SOLVES 4

04

Sustain

Monthly token governance, quarterly reviews, retainer advisor

SOLVES 3, 5

Continuous loop: each stage creates the next engagement

Training is the entry door: it builds trust and opens the next engagement.

Service catalogue: six pillars, one lifecycle

Strategy and Advisory

Maturity assessment, roadmap, governance frameworks, C-level workshops

Clear, funded AI programmes aligned with business goals

Architecture and Design

Model selection, data readiness, RAG and agent design, security controls

Enterprise-grade architecture ready for deployment

Implementation

Integration, custom assistants and agents, testing, change management

Deployed solutions delivering measurable value

Training and Certification

AI fundamentals, prompt engineering, leadership and technical programmes

Skilled teams able to adopt and scale AI

AI Token Economics

Usage analysis, cost forecasting, prompt efficiency, monthly governance

Lower token costs and predictable budgets

Managed AI Services

Monitoring, SLA-based support, optimisation cycles, retainer advisor

Continuous improvement and sustained impact

02 · OUR ANSWER

Signature offer: AI token economics

1	**Analyse**	Token usage by team, model and workflow
2	**Forecast**	Cost models under growth and agent scenarios
3	**Optimise**	Prompt efficiency and model-switching strategy
4	**Govern**	Monthly dashboard, alerts and cost controls

Predictable consumption for customers means healthier, longer-lived adoption for the platforms they build on.

THE PARADOX WE SOLVE

280x

cheaper per token

3x

enterprise LLM spend, year on year

93%

of firms exceeded token budgets

Source: McKinsey State of AI 2026 as reported by Fortune, 23 Sept 2026 (secondary summary; verify before external use).

03

Case studies

Case study: an AI voice agent for collections

Leading Saudi real estate developer

THE CHALLENGE

- Four divisions, no single source of truth
- Legacy CRM plus spreadsheets
- Collections chased by hand
- Strict regulatory compliance

OUR SOLUTION: DATA FOUNDATION FIRST, THEN A VOICE AGENT ON TOP

1 Unified data
CRM, contracts and payment schedules in one customer view

2 AI voice agent
Schedules and dials outbound calls in local Saudi Arabic, negotiates and agrees payment plans

3 Confirm and log
CRM update, then WhatsApp, SMS or email confirmation

4 Escalation
Complex cases handed to the team; every call recorded and auditable

Outcomes feed back into the data layer

RESULTS: REDUCTION IN AVERAGE DAYS OVERDUE, WEIGHTED BY OVERDUE BALANCE VALUE

Case study: AI bag scanning for an airline

Major regional low-cost airline

THE CHALLENGE

- Bag-size checks slowed the check-in counters
- Queues built up at the e-gates
- Agents judged bag sizes by eye
- Passengers unsure if a bag would fly

OUR SOLUTION: AN AI VISION MODEL INSIDE THE AIRLINE'S OWN APP

1 Scan
Passenger or agent points the app camera at the bag

2 AI vision
A trained vision model detects the bag and measures its size in real time

3 Verdict
Compared with cabin and hold limits, with an instant visual result

4 Action
Bag goes on the flight, or the passenger is redirected to check-in

- Passengers scan their bags at home, before reaching the airport
- Ground crew scan in the queue lines and redirect passengers on the spot

RESULTS IN LIVE OPERATIONS

40%
reduction in check-in delay
measured as time per passenger

20%
shorter queues at the e-gates ground crew scan and redirect in the lines

Case study: AI upskilling for a bank

Large regional bank, 300+ branches

THE CHALLENGE

- 300+ branches nationwide to upskill
- AI is about to be integrated into the bank
- Staff must be ready personally and professionally
- Governance risk in retail and corporate banking

OUR SOLUTION: TWO TRAINING TRACKS, ONE SHARED CURRICULUM

1 AI for everyday work

1,000+ staff across branches and head office

2 AI for Managers and Decision Makers

200 managers and decision makers

TOPICS COVERED

- AI governance in retail and corporate banking
- Prompt engineering
- Retail and corporate banking use cases
- Different AI tools: strengths and fallbacks
- Individual AI projects

RESULTS ACROSS THE PROGRAMME

1,000+
staff trained in AI for everyday work

200
managers and decision makers trained

97%
satisfaction rate

98%
would recommend it to others

96%
asked for the next-level AI course

How value is measured at the bank

Indicative targets, to be baselined with the bank

ADOPTION

70–80%

weekly active AI users within 90 days

PRODUCTIVITY

3–5 h

saved per person per week

GOVERNANCE

100%

pass the AI policy check, zero data incidents

DELIVERY

1

live AI project per participant

ROI

(V−C)/C

(Value of time saved − cost) / cost

Case study: AI call-center agent

Regional educational institution network

WHAT WE BUILT

- Native Arabic virtual agent with a Saudi accent
- 3 fully integrated workflows
- Hosted on public cloud infrastructure
- Live within 1 month of the PO

OUR SOLUTION: AN AI CALL-CENTER AGENT ACROSS 3 INTEGRATED WORKFLOWS

1

Call intake

Virtual agent answers in Saudi Arabic and identifies the caller and the request

2

Request handling

Agent completes the request directly in the institution's systems

3

Confirmation and escalation

Caller gets confirmation; complex cases pass to a human colleague

RESULTS IN LIVE OPERATIONS

20,000

minutes of calls handled automatically per month

96%+

accuracy of the Saudi-accent Arabic agent

40%*

workforce reduction, with staff moved to other roles

25%

ROI after the first quarter

1 month

from purchase order to deployment

* The 40% workforce reduction was a redeployment: people moved into other roles within the organization.

“Natural Saudi Arabic voices, female and male, that greet warmly, ask how you are, pause and breathe like a real agent.”

The voice standard behind the AI call-center agent

04

Working with us

Extending your capacity: a specialised AI services partner

We extend the capacity of leading AI platform providers, accelerate customer adoption and ensure responsible, scalable AI implementation across the Middle East.

Certified by Anthropic: our consultants hold Anthropic certification for enterprise AI delivery

Enablement and adoption

- Adoption programmes for cloud and AI platforms
- Enterprise training and certification
- Deployment support and token cost governance
- Support for regional skilling ambitions in KSA and UAE

Responsible AI and governance

- Adoption frameworks for enterprise deployment
- Governance, risk and safety workshops
- Enterprise training on responsible use
- Technical integration support

HOW WE ENGAGE

Referral

Customers routed to us for strategy, training or deployment

Co-sell

Working alongside sales teams to accelerate adoption

Joint workshops and events

Customer-facing programmes and training

White-label

Delivery under partner brand when required

Next 90 days: from first conversation to first result

	Days 1–30	Days 31–60	Days 61–90
CLIENTS	Free executive AI briefing (2 hours)	AI readiness assessment and training pilot	Roadmap and AI token economics baseline
PARTNERS	Introduction and alignment on partner motion	Joint workshop pilot in KSA or UAE	Referral pipeline and partner onboarding
